# wieland concast

## SAFETY DATA SHEET

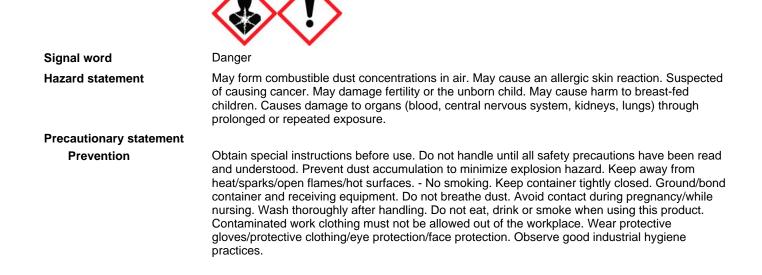

### 1. Identification

| Product identifier              | Copper Zinc Alloys   |            |  |
|---------------------------------|--|------------|--|
| Other means of identification   |  |            |  |
| SDS number                      | 3  |            |  |
| Product code                    | C21000, C22000, C22600, C23000, C24000, C26000, C26100, C26800, C27000, C27450, C28000, C31400, C31600, C36000, C37700, C44300, C46400, C67300, C67310, C67400, C69300, C69340, C83400, CGM-7, CA673-MOD, ADVSI, 422, 70/30, 80/20 |            |  |
| Recommended use                 | Manufacturing  |            |  |
| Recommended restrictions        | None known.  |            |  |
| Manufacturer/Importer/Supplier/ | /Distributor information   |            |  |
| Company name                    | Wieland Concast  |            |  |
| Address                         | 14315 State Route 113  |            |  |
|                                 | Wakeman, OH 44889  |            |  |
|                                 | United States of America   |            |  |
| E-mail                          | sales.concast@wieland.com  |            |  |
| Telephone                       | 1-440-965-4455   |            |  |
| Emergency telephone             | CHEMTREC (24-hrs)  |            |  |
|                                 | 1-800-424-9300   |            |  |
| 2. Hazard(s) identification     |  |            |  |
| Physical hazards                | Not classified.  |            |  |
| Health hazards                  | Sensitization, skin  | Category 1 |  |
|                                 | Carcinogenicity  | Category 2 |  |

| azai us        |   | Calegory   |
|----------------|---|--|
|                | Carcinogenicity                                     | Category 2   |
|                | Reproductive toxicity (fertility, the unborn child) | Category 1A  |
|                | Reproductive toxicity                               | Effects on or via lactation                                |
|                | Specific target organ toxicity, repeated exposure   | Category 1 (blood, central nervous system, kidneys, lungs) |
| efined hazards | Combustible dust                                    |  |

**OSHA** defined hazards

Label elements

| Response                                     | If exposed or concerned: Get medical advice/attention. If on skin: Wash with plenty of water. If skin irritation or rash occurs: Get medical advice/attention. Take off contaminated clothing and wash it before reuse. In case of fire: Use appropriate media to extinguish. |
|--|---|
| Storage                                      | Store locked up.  |
| Disposal                                     | Dispose of contents/container in accordance with local/regional/national/international regulations.   |
| Hazard(s) not otherwise<br>classified (HNOC) | None known.   |
| Supplemental information                     | None.   |

### 3. Composition/information on ingredients

**Mixtures** 

| Chemical name | CAS number | %           |
|---------------|------------|-------------|
| Copper        | 7440-50-8  | 59 - 96     |
| Zinc          | 7440-66-6  | 6.2 - 41    |
| Silicon       | 7440-21-3  | 0 - 4.5     |
| Lead          | 7439-92-1  | 0 - 3.7     |
| Tin           | 7440-31-5  | 0.005 - 3.5 |
| Manganese     | 7439-96-5  | 0 - 3.5     |
| Aluminum      | 7429-90-5  | 0 - 2       |
| Nickel        | 7440-02-0  | 0.005 - 1.2 |

**Composition comments** 

All concentrations are in percent by weight unless otherwise indicated. Components not listed are either non-hazardous or are below reportable limits.

### 4. First-aid measures

| Inhalation   | Move to fresh air. Call a physician if symptoms develop or persist.   |
|--|---|
| Skin contact   | Remove contaminated clothing immediately and wash skin with soap and water. In case of eczema or other skin disorders: Seek medical attention and take along these instructions. In case of contact with hot or molten product, cool rapidly with water and seek immediate medical attention. Do not attempt to remove molten product from skin because skin will tear easily. Cuts or abrasions should be treated promptly with thorough cleansing of the affected area. |
| Eye contact  | Do not rub eyes. Rinse with water. Get medical attention if irritation develops and persists.   |
| Ingestion  | Rinse mouth thoroughly if dust is ingested. Get medical attention if symptoms occur.  |
| Most important<br>symptoms/effects, acute and<br>delayed                     | Elevated temperatures or mechanical action may form dust and fumes which may be irritating to the eye, mucous membranes and respiratory tract. Narcosis. Behavioral changes. Decrease in motor functions. May cause an allergic skin reaction. Dermatitis. Rash. Prolonged exposure may cause chronic effects. Contact with hot material can cause thermal burns which may result in permanent damage.  |
| Indication of immediate<br>medical attention and special<br>treatment needed | Provide general supportive measures and treat symptomatically. Keep victim under observation. Symptoms may be delayed.  |
| General information  | IF exposed or concerned: Get medical advice/attention. If you feel unwell, seek medical advice (show the label where possible). Ensure that medical personnel are aware of the material(s) involved, and take precautions to protect themselves. Show this safety data sheet to the doctor in attendance. Wash contaminated clothing before reuse.  |
| 5. Fire-fighting measures  |   |
| Suitable extinguishing media   | Special powder against metal fires. Dry sand. Carbon dioxide (CO2).<br>Apply extinguishing media carefully to avoid creating airborne dust. Avoid high pressure media<br>which could cause the formation of a potentially explosible dust-air mixture.  |
| Unsuitable extinguishing<br>media  | Do not use water or halogenated extinguishing media. Hot molten material will react violently with water resulting in spattering and fuming.  |
| Specific hazards arising from the chemical                                   | Explosion hazard: Avoid generating dust; fine dust dispersed in air in sufficient concentrations and in the presence of an ignition source is a potential dust explosion hazard. Contact with acids will release flammable hydrogen gas. During fire, gases hazardous to health may be formed. Combustion products may include: metal oxides. In a fire, nickel may form nickel carbonyl, a highly toxic substance and known carcinogen.                                  |
| Special protective equipment and precautions for firefighters                | Self-contained breathing apparatus and full protective clothing must be worn in case of fire.   |

| Occupational exposure limits<br>US. OSHA Specifically Regu<br>Components  | lated Substances (29 CFR 1910.1001-1053)<br>Type Value   |
|---|--|
| 8. Exposure controls/perse  | onal protection  |
| Conditions for safe storage, including any incompatibilities              | equipment. Wash hands thoroughly after handling. Observe good industrial hygiene practices. Do not allow water to get into container because of violent reaction and possible flash fire.<br>Store locked up. Keep containers tightly closed in a dry, cool and well-ventilated place. Store away from incompatible materials (see Section 10 of the SDS).   |
|   | Do not breathe dust. Avoid contact with eyes, skin, and clothing. Avoid prolonged exposure. When using, do not eat, drink or smoke. Pregnant or breastfeeding women must not handle this product. Should be handled in closed systems, if possible. Wear appropriate personal protective   |
| 7. Handling and storage<br>Precautions for safe handling                  | Obtain special instructions before use. Do not handle until all safety precautions have been read<br>and understood. Minimize dust generation and accumulation. Avoid significant deposits of<br>material, especially on horizontal surfaces, which may become airborne and form combustible dust<br>clouds and may contribute to secondary explosions. Routine housekeeping should be instituted to<br>ensure that dusts do not accumulate on surfaces. Dry powders can build static electricity charges<br>when subjected to the friction of transfer and mixing operations. Provide adequate precautions,<br>such as electrical grounding and bonding, or inert atmospheres. Keep away from heat/sparks/open<br>flames/hot surfaces No smoking. Combustible dust clouds may be created where operations<br>produce fine material (dust). Handling and processing operations should be conducted in<br>accordance with 'best practices' (e.g. NFPA-654). Explosion-proof general and local exhaust |
| Environmental precautions   | Avoid discharge into drains, water courses or onto the ground.   |
|   | Never return spills to original containers for re-use. Put material in suitable, covered, labeled containers. For waste disposal, see section 13 of the SDS.   |
|   | Small Spills: Sweep up or vacuum up spillage and collect in suitable container for disposal.   |
|   | Large Spills: Wet down with water and dike for later disposal. Shovel the material into waste container. Following product recovery, flush area with water.  |
| Methods and materials for containment and cleaning up                     | Eliminate all ignition sources (no smoking, flares, sparks, or flames in immediate area). Take precautionary measures against static discharge. Use only non-sparking tools. Avoid dispersal of dust in the air (i.e., clearing dust surfaces with compressed air). Minimize dust generation and accumulation. Collect dust using a vacuum cleaner equipped with HEPA filter. The product is immiscible with water and will sediment in water systems. Stop the flow of material, if this is without risk. Allow molten material to cool and solidify before disposal. Recover and recycle, if practical.  |
| Personal precautions,<br>protective equipment and<br>emergency procedures | Keep unnecessary personnel away. Keep people away from and upwind of spill/leak. Use only non-sparking tools. Dust deposits should not be allowed to accumulate on surfaces, as these may form an explosive mixture if they are released into the atmosphere in sufficient concentration. Wear appropriate protective equipment and clothing during clean-up. Do not breathe dust. Use a NIOSH/MSHA approved respirator if there is a risk of exposure to dust/fume at levels exceeding the exposure limits. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Ensure adequate ventilation. Local authorities should be advised if significant spillages cannot be contained. For personal protection, see section 8 of the SDS.   |
| 6. Accidental release meas  | sures  |
| General fire hazards  | Solid metal is not flammable; however, finely divided metallic dust or powder may form an explosive mixture with air.  |
| Specific methods  | Use standard firefighting procedures and consider the hazards of other involved materials.   |
| Fire fighting<br>equipment/instructions                                   | In case of fire and/or explosion do not breathe fumes. Move containers from fire area if you can do so without risk.   |

### 9. Physical and chemical properties

| Appearance                                 |  |
|--|--|
| Physical state                             | Solid.   |
| Form                                       | Solids, Rectangles, Shapes, Tubes, Clips, Shells and Turnings.                     |
| Color                                      | Yellow to red.   |
| Odor                                       | None.  |
| Odor threshold                             | Not applicable.  |
| рН   | Not applicable (material is insoluble in water).                                   |
| Melting point/freezing point               | Property has not been measured.  |
| Initial boiling point and boiling range    | Property has not been measured.  |
| Flash point                                | Not applicable, material is a solid.   |
| Evaporation rate                           | Not applicable, material is a solid.   |
| Flammability (solid, gas)                  | Solid metal is not flammable. Fine particles may form explosive mixtures with air. |
| Upper/lower flammability or exp            | losive limits  |
| Explosive limit - lower (%)                | Property has not been measured.  |
| Explosive limit - upper (%)                | Property has not been measured.  |
| Vapor pressure                             | Not applicable, material is a solid.   |
| Vapor density                              | Not applicable, material is a solid.   |
| Relative density                           | 7.5 - 9 (Water=1)  |
| Solubility(ies)                            |  |
| Solubility (water)                         | Insoluble in water.  |
| Partition coefficient<br>(n-octanol/water) | Not applicable, product is a mixture.  |
| Auto-ignition temperature                  | Property has not been measured.  |
|  |  |

Copper Zinc Alloys

| Decomposition temperature | Property has not been measured.      |
|---------------------------|--------------------------------------|
| Viscosity                 | Not applicable, material is a solid. |
| Other information         |                                      |
| Bulk density              | Property has not been measured.      |
| Density                   | 7.5 - 9 g/cm <sup>3</sup>            |
| Explosive properties      | Not explosive.                       |
| Kinematic viscosity       | Not applicable, material is a solid. |
| Oxidizing properties      | Not oxidizing.                       |
| Particle size             | Property has not been measured.      |

### 10. Stability and reactivity

| Reactivity                            | The product is stable and non-reactive under normal conditions of use, storage and transport.  |
|---------------------------------------|--|
| Chemical stability                    | Material is stable under normal conditions.  |
| Possibility of hazardous<br>reactions | Contact with strong acids will release highly flammable hydrogen gas.  |
| Conditions to avoid                   | Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. Contact with incompatible materials. Minimize dust generation and accumulation. |
| Incompatible materials                | Strong oxidizing agents. Acids.  |
| Hazardous decomposition<br>products   | Decomposition is not expected under normal conditions of use and storage.  |

### 11. Toxicological information

### Information on likely routes of exposure

| Inhalation   | Prolonged inhalation may be harmful. Elevated temperatures or mechanical action may form dust<br>and fumes which may be irritating to the mucous membranes and respiratory tract. Heating above<br>the melting point releases metallic oxides which may cause metal fume fever by inhalation. The<br>symptoms are shivering, fever, malaise and muscular pain.   |
|--|--|
| Skin contact   | May cause an allergic skin reaction. Hot or molten material may produce thermal burns.   |
| Eye contact  | Elevated temperatures or mechanical action may form dust and fumes which may be irritating to the eyes. Molten material will produce thermal burns.  |
| Ingestion  | Dust: May cause discomfort if swallowed.   |
| Symptoms related to the physical, chemical and toxicological characteristics | Elevated temperatures or mechanical action may form dust and fumes which may be irritating to the eye, mucous membranes and respiratory tract. Narcosis. Behavioral changes. Decrease in motor functions. May cause an allergic skin reaction. Dermatitis. Rash. Prolonged exposure may cause chronic effects. Contact with hot material can cause thermal burns which may result in permanent damage. |

### Information on toxicological effects

| Acute toxicity                    | Not expected to be acutely toxic.  |                     |
|-----------------------------------|--|---------------------|
| Components                        | Species  | Test Results        |
| Nickel (CAS 7440-02-0)            |  |                     |
| Acute                             |  |                     |
| Inhalation                        |  |                     |
| NOAEC                             | Rat  | 10200 mg/l, 1 hours |
| Oral                              |  |                     |
| LD50                              | Rat  | > 9000 mg/kg        |
| Skin corrosion/irritation         | May cause irritation through mechanical abras  | ion.                |
| Serious eye damage/eye irritation | Dust or powder may cause mechanical eye irritation.  |                     |
| Respiratory or skin sensitization | n  |                     |
| <b>Respiratory sensitization</b>  | Not a respiratory sensitizer.  |                     |
| Skin sensitization                | May cause an allergic skin reaction.   |                     |
| Germ cell mutagenicity            | No data available to indicate product or any components present at greater than 0.1% are mutagenic or genotoxic. |                     |
| Carcinogenicity                   | Suspected of causing cancer.   |                     |

Copper Zinc Alloys

| IARC Monographs. Overall I                         | Evaluation of Carcinogenicity   |  |

| Not listed.  |   |  |
| Reproductive toxicity                              | May cause harm to breastfed babies. May damage fertility. May damage the unborn child.  |  |
| Specific target organ toxicity - single exposure   | Not classified.   |  |
| Specific target organ toxicity - repeated exposure | Causes damage to organs (blood, central nervous system, kidneys, lungs) through prolonged or repeated exposure.   |  |
| Aspiration hazard                                  | Not relevant, due to the form of the product.   |  |
| Chronic effects                                    | Prolonged inhalation may be harmful. Causes damage to organs through prolonged or repeated exposure. Prolonged exposure may cause chronic effects.  |  |
|  | Lead may produce maternal toxicity, toxicity to the fetus, and adverse effects to blood, bone marrow, central/peripheral nervous systems, kidney, liver, and reproductive system.   |  |
|  | Chronic exposure to breathing low levels of manganese dust or fume over a long period of time can result in "manganism," a disease of the central nervous system similar to Parkinson's Disease, gait impairment, muscle spasms and behavioral changes.   |  |
| Further information                                | Welding or plasma arc cutting of metal and alloys can generate ozone, nitric oxides and ultraviolet radiation. Short-term (acute) overexposure to welding fumes may result in discomfort such as metal fume fever, dizziness, nausea, or dryness or irritation of nose, throat, or eyes. May aggravate pre-existing respiratory problems (e.g. asthma, emphysema). Ozone overexposure may result in mucous membrane irritation or pulmonary discomfort. UV radiation can cause skin erythema and welders flash. |  |
|  |   |  |

### 12. Ecological information

Ecotoxicity

The product is not classified as environmentally hazardous. Alloys in massive forms present a limited hazard for the environment.

### Dust: Very toxic to aquatic life with long lasting effects.

| Components                 |   | Species  | Test Results                                    |

### 13. Disposal considerations

| Disposal instructions      | Recover and recycle, if practical. Consult authorities before disposal. Collect and reclaim or<br>dispose in sealed containers at licensed waste disposal site. Dispose of contents/container in<br>accordance with local/regional/national/international regulations. |
|----------------------------|--|
| Local disposal regulations | Dispose in accordance with all applicable regulations.   |
| Hazardous waste code       | The waste code should be assigned in discussion between the user, the producer and the waste disposal company.   |

Waste from residues / unused products

Contaminated packaging

Dispose of in accordance with local regulations. Empty containers or liners may retain some product residues. This material and its container must be disposed of in a safe manner.

Since emptied containers may retain product residue, follow label warnings even after container is emptied. Empty containers should be taken to an approved waste handling site for recycling or disposal.

### 14. Transport information

#### DOT

Not regulated as dangerous goods.

#### IATA

Not regulated as dangerous goods.

### IMDG

Not regulated as dangerous goods.

Transport in bulk according to Not applicable. Annex II of MARPOL 73/78 and the IBC Code

### 15. Regulatory information
